

## Em-Tube Merchant Website Description/information

### Description

The Em-Tube tubular skylight effectively transmits natural daylight to internal rooms or areas that do not receive adequate daylight. Natural daylight is captured at roof level and directed downwards through the rigid or flexible tubes and then diffused at ceiling level.

Rigid tube system offers 98% reflectivity on inner surface and allows up to 20 times more light (2200 lux) than a 100w bulb (105 lux). Particularly suitable for longer tube lengths. Flexible tube system provides up to 14 times more light (1500 lux) than a 100w bulb. Particularly suitable for shorter tube lengths.

### Flat roof application

Em-Tube skylight for use on flat roof areas. Available with PVC Em-Curb (recommended option) or builder's upstand. Available in 350mm, 450mm and 550mm diameters with flexible tube system at 3m standard length or rigid tube system up to 700mm standard length.

### Pitched roof application

Em-Tube skylight for use on pitched roof areas. Available with slate roof kit for 8-16mm thickness and tile roof kit for 14-32mm thickness. Available in 350mm, 450mm and 550mm diameters with flexible tube system at 3m standard length or rigid tube system up to 1m standard length.
